

Excess pressure regulator, straight through
DN 15 - 150

ARI-PREDEX®
Excess pressure regulator, straight
through with diaphragm actuator UDA

- Actuator with rolling diaphragm

Grey cast iron
SG iron
Cast steel

Fig. 705

Page 2

Fig. 705

Features:

- Compact design
- Construction without pillars
- Exact and easy adjustment
- Diameter independent ranges
- Simple change of spring and actuator
- 5 exchangeable actuator sizes
- 3 exchangeable spring sizes
- Pressure balanced by stainless steel bellow
- Spindle sealing via stainless steel bellow
- Secondary stem sealing (optional)
- Tapered seat ring
- Screwed seat ring
- Kvs-values reduceable
- Flow divider for noise reduction (optional)
- Plug with PTFE soft sealing (optional)

Excess pressure regulator, straight through with diaphragm actuator UDA

Excess pressure regulators are proportional regulators with permanent control deviation depending from the construction.
 The actual control deviation depends on the valve load.
 $(Kv\text{-value} / Kvs\text{-value-max}) \times \text{Proportional range} = \text{Actual control deviation}$
 The values shown are preliminary values and may vary by the real plant.

Pressure-temperature-ratings Intermediate values for max. permissible operational pressures can be determined by linear interpolation of the given temperature / pressure chart.

Application

The excess pressure regulator is a self operated, direct acting proportional regulator, which regulates the upstream pressure.

The upstream pressure (p1) is regulated, this means, the valve opens when the upstream pressure rises over an adjusted set point. If the upstream pressure decreases under the adjusted set point, the valve closes automatically. Because of the stainless steel bellows, the downstream pressure (p2) has no influence.

Operating fields are to regulate fluids of the group II acc. to Pressure Equipment Directive 97/23/EC, e.g. steam, neutral gases, vapours and liquids. With steam and liquids, having temperatures higher than the allowable working temperatures a water seal pot must be installed in the control line (to protect actuator diaphragm) (refer to page 6).

Installation in the control line can be seen in the system drawing:

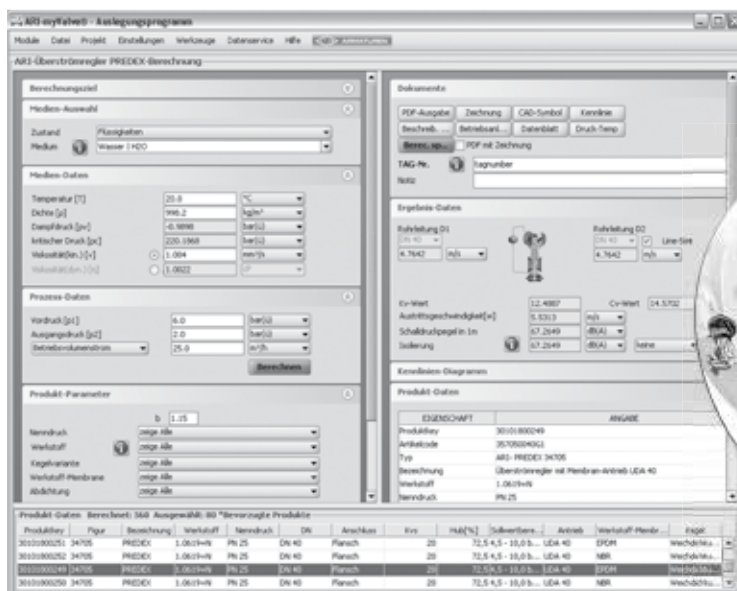

Sizing

For the calculation you have the program myValve (Program part PREDEX - Excess pressure regulator). After giving in the process data, the Fig.-No. and size is recommended out of the integrated data bank. The diameter of the piping in front and behind of the Excess pressure regulator can also be calculated with the max. allowable flow velocities with myValve.

The necessary upstream pressure gives the needed pressure range. Because the regulation tolerance at the end of the range is smaller, the smaller range must be used, in case of a range overlapping. For example: upstream pressure 2,4 bar(g), choose actuator range 0,8 - 2,5 bar(g), although 2-5 bar(g) could be used.

The safety valve used to secure the upstream pressure must have an adequate distance between set pressure and upstream pressure. The valve sizing must be done with the full capacity of the supplying generator (steam generator, compressor, pump, etc.) while the excess pressure regulator is closed. With this found capacity you can, with myValve (Program part: Safety valves), select the safety valve, and with the excess pressure regulator and other valves, administer them under a project.

Information / restriction of technical rules need to be observed!

Operating and installation instructions can be downloaded at www.ari-armaturen.com.

ARI-Valves of EN-JL1040 are not allowed to be operated in systems acc. to TRD 110.

A production permission acc. to TRB 801 No. 45 is available (acc. to TRB 801 No. 45 EN-JL1040 is not allowed.)

The engineer, designing a system or a plant, is responsible for the selection of the correct valve.

Resistance and fitness must be verified (or contact the manufacturer for information).

Diaphragm-Actuator UDA 40 - UDA 400

- Rolling diaphragm
- Connection through a central thread
- Spindle connection with a fast coupling
- Delivered with a flow restrictor and 90°-elbow

Material (Diaphragm):

EPDM -40°C to +110°C

NBR -40°C to +100°C

Selection of possible applications:

- Neutral gases, Vapours and liquids
(only fluids of group II acc. to Pressure Equipment Directive 97/23/EC)

Pneumatic Actuator		UDA 400	UDA 250	UDA 160	UDA 80	UDA 40
ØD	(mm)	300	250	210	170	140
H	(mm)	135	90	80	75	75
Weight	(kg)	13,4	8,1	5,1	3,7	2,9

Water seal pot

(for media temperatures higher than the allowed diaphragm temperature)

- Delivered with a funnel

Selection of possible applications:

- Steam
- Hot water
- Neutral liquids

90°-elbow R1/4"
(e.g. ERMETO WE10-LLR)

Flow restrictor
G1/4" / G1/4"

P-Actuator		UDA 400	UDA 250	UDA 160	UDA 80	UDA 40
Size		2			1	
ØD	(mm)	140			102	
L	(mm)	110			83	
V	(dm³)	1,2			0,6	

Flow divider for noise reduction

Plug with PTFE soft sealing
(max. 200°C, only for standard Kvs-values)

Secondary stem sealing

Please indicate when ordering:

- Figure-No.
- Nominal diameter
- Nominal pressure
- Body material
- Plug version
- Kvs-value
- Pressure range
- Actuator
- Special design / accessories

Example:

Figure 35.705, Nominal diameter DN100, Nominal pressure PN40, Body material 1.0619+N, metal seat, Kvs 125, 0,8 - 2,5 bar, ARI-UDA 160 with NBR-Membrane, Water seal pot size 1.
